

# “PASSING THE TORCH”

## The Fundamentals of Program Evaluation

*Enhancing Community-Based First Nation Health Programs, Research, & Policy - Building Capacity to Design, Deliver, and Evaluate Programs*

Canad Inn ~ Polo Park  
Winnipeg, Manitoba

February 26 ~ 28, 2014

Governments and funders rely on evaluations and data to make decisions on the merits of programs and services. First Nation leaders and program developers need to have the necessary knowledge for meaningful participation and control of evaluations. This training workshop will provide you with the fundamentals to help you engage in these discussions and assert greater control over evaluation processes.

Rachel Eni is an assistant professor and community-based research scientist at the University of Manitoba. Her work focuses on maternal, infant and community health in Indigenous communities around the world. Rachel has a keen interest in cultures, traditional and complementary approaches to health and wellness. She teaches courses on health promotion, program development and implementation.

Rachel has designed and implemented evaluation programs in health promotion since 1996; she brings to her courses varied and innovative ideas. She definitely does not stop at conventional approaches and believes that we must do what it takes to get to wellness.

Rachel is an Indigenous woman to the Middle East and speaks 3 languages. She adores her family, has three children and one grandchild.
